

RAMAS

Introducción Ramas (13min)

Rama: apuntador a un commit en específico.

- Nuevas funcionalidades
- Fix de Bugs
- Diferentes desarrolladores
- Diferentes ambientes -- desarrollo/pruebas/producción

1. Listar ramas actuales -- * es la actual rama

```
git branch
```

2. Creación de ramas

```
git branch nueva_rama ( - sin cambiarse a ella)  
git checkout -b dev ( -se cambia a ella)
```

3. Cambiarse a una rama distinta

```
git checkout nueva_rama
```

4. Eliminar rama

```
git branch -d nueva_rama
```

5. Fusionar la rama actual con otra rama

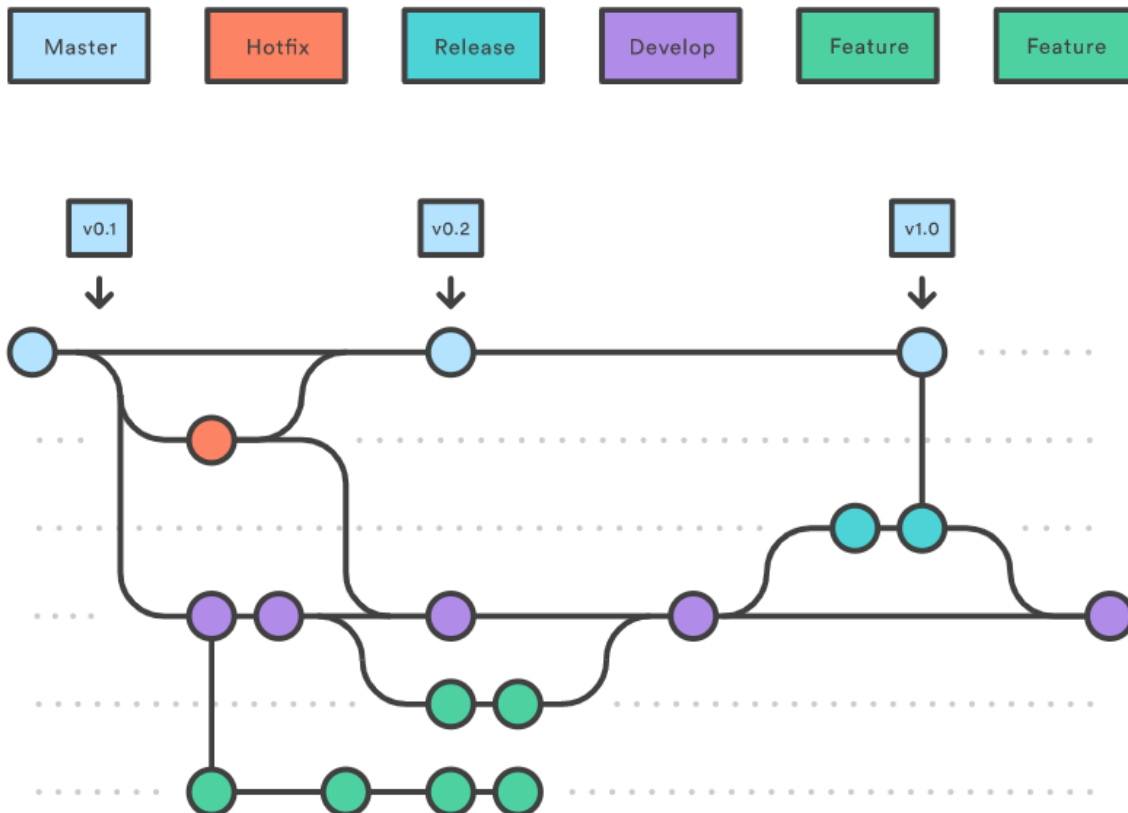

```
git merge origin/nombre_rama
```

6. Bajar últimos cambios

```
git pull origin nombre_rama
```

7. Volver a un commit anterior

```
git checkout hashdelcommit
```

Docker Container for Laravel 5.x with PHP7

This is a docker container for Laravel 5.x with composer installed.
[Alpine Linux](https://hub.docker.com/_/alpine/) base image its very small at `~75 MB`.
This image is made for running tests for laravel not serving it over a web servicer like Nginx. It is primarily being u
Do have a look at the [PHP7](https://github.com/geshan/docker-laravel-alpine/tree/php7-branch) version of this image.

[![]](https://badge.imagelayers.io/geshan/laravel-alpine:latest.svg)(https://imagelayers.io/?images=geshan/laravel-alpi

Pull it from docker registry

To pull the docker image you can do it with:

```
...  
docker pull geshan/alpine-laravel:php7  
...
```

Usage

<<<<<< HEAD

After pulling the image from docker registry, go into laravel project that has a composer.json.

=====

After pulling the image from docker registry, go into laravel project that has a composer.json. Here conflict.

>>>>>> 699b6b6... for conflict

Then run the following commands to run php or composer:

...

```
docker run -v $(pwd):/var/www geshan/laravel-alpine "composer install --prefer-dist"
```

...

Lets say if you are have PHPUnit in your composer.json, you can run the following commands to run your tests:

...

```
docker run -v $(pwd):/var/www geshan/laravel-alpine "./vendor/bin/phpunit --version"
```

...

```
docker run -v $(pwd):/var/www geshan/php7-laravel-alpine "./vendor/bin/phpunit"
```

...

git conflict

1. Capta nuevos cambios

```
git fetch origin
```

2. Integra cambios

```
git rebase origin/master
```

3. ¿Surgen conflictos?

4. Guardar nuevos cambios (resolución)

```
git add nombre_archivo  
git rebase --continue
```
